Professional Statement

A Cyber-Security Student with a strong interest in offensive Security and adversary simulation. Highly Driven by curiosity to understand how systems are exploited and how attackers think, with the goal of contributing to stronger security practices. Currently looking for the role of Cyber Security Intern, Penetration Tester Intern, Web Security Intern & Security Research Intern.

Technical Skills

- **Cyber Security Essentials** — Conducted Nmap vulnerability scans to map open ports and active hosts for Defense-in-Depth strategy, auditing processes (ps), and analyzing /var/log with grep to trace unauthorized authentication. Monitored network traffic with Wireshark and tcpdump to detect packet anomalies, troubleshoot latency, and mitigate MitM risks.
- **Security Tools** — Nmap (network scanning & enumeration), Burp Suite (traffic interception & analysis — foundational)
- **Programming** — Python (OS, subprocess, Tkinter, regex) for security tooling and automation by creating different algorithms such as finding specified Ip addresses from the dataset.
- **Linux & Networking** — Linux fundamentals and shell navigation; hands-on with FTP, SMB, SSH, Telnet protocols
- **Work Ethic** — Methodical and detail-oriented, with a research-driven approach to problem solving

Certifications

- **Cisco — Introduction to Cybersecurity**
- **Google Cybersecurity Professional Certificate**

Projects

- **MacNinja** [Link] — Python network security tool that spoofs MAC addresses to demonstrate attacks and defenses: how an attacker might spoof a router-approved MAC to intercept traffic, and how defenders can detect and mitigate it.
- **TryHackMe Writings** [Link] — Documented THM room walkthroughs covering pentesting methodology, vulnerability exploitation, and offensive security.
- **HackTheBox Writeups** [Link] — Documented HTB room walkthroughs covering pentesting methodology, vulnerability exploitation, and offensive security.
- **Recon Toolkit** — Reconnaissance automation tool for penetration testing workflows; currently in the planning phase.

Work Experience

MacNinja

Python: regex, os, subprocess, sys, random, Tkinter

Forage Virtual Internships

- **Commonwealth Bank of Australia** — Intro to Cybersecurity (August 2025)
- **Deloitte Australia** — Cyber Security Analyst (August 2025)
- **TCS** — Cybersecurity Team (August 2025)

Education

GGSIP University — Vivekananda Institute of Professional Studies 2025 – 2029

Bachelor of Computer Applications (Hons.)
